Issues

Issue Name	Issue Type	Issue Prior	URLs	% of Total	Description	How To Fix	Help URL
Images: MI Issue	Low	1	0.96	Images that include alt attributes with descriptive alt text for images to help users and the search engines understand them better. Where possible, decorative images should be provided using CSS background images or alternatively a null (empty) alt text should be provided (alt="") so that they can be ignored by assistive technologies, such as screen reader.			
H2: Mission Warning	Low	24	70.58	Pages which Consider using logical and descriptive <h2> as important pages that help the user and search engines better understand the page.			
Validation: Issue	High	2	6.41	Pages miss Ensure all pages have a valid <head> element with appropriate metadata for the document that is the first element in the <html> element.			
Response: Warning	Low	222	60.33	External UI All links on a website should ideally resolve to 200 OK URLs. Errors such as 404 broken links should be updated so users are taken to the correct URL, or removed. A 403 forbidden error occurs when a web server denies access to the SEO Spider's request and can often be resolved by switching the user-agent to Chrome via 'Config'			
H2: Multi: Warning	Low	3	8.82	Pages which Ensure <h2>s are used in a logical hierarchical heading structure, and update where appropriate utilising the full heading rank between (h3 - h6) for additional headings.			
Security: Warning	Low	36	97.3	URLs that 'Set a strict Content-Security-Policy response header across all page to help mitigate cross site scripting (XSS) and data injection attacks.			
Links: Page Warning	High	2	5.88	Pages that Review the pages and whether there are links in the raw or rendered HTML. Switch to JavaScript rendering mode if links are only in the rendered HTML. While Google is able to render pages and see client-side only links, consider including important links server side in the raw HTML. For pages that simply don't link to any other int			
H1: Non-S: Warning	Low	1	2.94	Pages with Ensure the <h1> is the first heading on the page. Headings should be in a logical sequential order from <h1> to <h6>. Review and update page heading levels so they are descending in order, for example the first heading level should be an <h1>, and this should be followed by an <h2>.			
Security: Warning	Low	36	97.3	URLs that 'The HSTS header should be used across all pages to instruct the browser that it should always request pages via HTTPS, rather than HTTP.			
H2: Over 7: Opportunity	Low	1	2.94	Pages which Write concise <h2>s for users, including target keywords where natural for users - without keyword stuffing.			
Page Titles: Opportunity	Medium	9	26.47	Pages which Write concise page titles to ensure important words are not truncated in the search results, not visible to users and potentially weighted less in scoring.			
Meta Desc: Opportunity	Low	32	94.12	Pages which It's important to write unique and descriptive meta descriptions on key pages to communicate the purpose of the page to users, and entice them to click on your result over the competition. It can also mean Google use this description for snippets in the search results for some queries, rather than make up their own based upon			
Images: MI: Opportunity	Low	1	0.96	Image Define all image sizes as their native size with width and height attributes in the HTML. This allows the browser to calculate enough space for each image before it loads, avoiding large layout shifts.			
Directives: Warning	High	2	5.56	URLs with a 'nofollow' should be reviewed carefully to ensure that links shouldn't be crawled and PageRank shouldn't be passed on. If outlinks should be crawled and PageRank should be passed onwards, then the 'nofollow' directive should be removed.			
Validation: Issue	High	2	5.41	Pages miss Ensure all pages have a single valid <body> element with appropriate content for the document.			
Security: Warning	Low	2	5.41	URLs that 'Consider the benefits of including the rel="noopener" link attribute on any links that contain the target="_blank" attribute to avoid security and performance issues for the users of legacy browsers that may visit the website.			
Response: Warning	Low	1	0.27	Internal URL Ideally all internal links need to be canonical, resolving URLs, and avoid linking to URLs that redirect. This reduces latency of redirect hops for users, and enhanced efficiency for search engines.			
Images: MI: Issue	Low	102	98.06	Images that include descriptive alt text for images to help users and the search engines understand them better. Where possible, decorative images should be provided using CSS background images or alternatively a null (empty) alt text should be provided (alt="") so that they can be ignored by assistive technologies, such as screen readers			
Security: Warning	Low	2	5.41	URLs that 'Consider the benefits of including the rel="noopener" link attribute on any links that contain the target="_blank" attribute to avoid security and performance issues for the users of legacy browsers that may visit the website.

H1: Multi: Warning	Medium	3	8.82	Pages which Consider updating the HTML to include a single <h1> on each page, and utilising the full heading rank between (h2 - h6) for additional headings.			
H1: Mission: Issue	Medium	6	17.65	Pages which Ensure important pages have concise, descriptive and unique headings to help users, and enable search engines to score and rank the page for relevant search queries.			
H2: Dupli: Opportunity	Low	2	5.88	Pages which Update duplicate <h2>s as necessary, so important pages contain a unique and descriptive <h2> for users and search engines. If these are duplicate pages, then fix the duplicated pages by linking to a single version, and redirect or use canonicals where appropriate.			
Security: Warning	Low	4	10.81	URLs miss! To minimise security issues, the X-Frame-Options response header should be supplied with a 'DENY' or 'SAMEORIGIN' value.			
Security: Warning	Low	36	97.3	URLs that 'To minimise security issues, the X-Content-Type-Options response header should be supplied and set to 'nosniff'. This instructs browsers to rely only on the Content-Type header and block anything that does not match accurately. This also means the content-type set needs to be accurate.			
Page Titles: Opportunity	Medium	1	2.94	Pages which Consider updating the page title to take advantage of the space left to include additional target keywords or USPs.			
URL: Param: Warning	Low	2	5.41	URLs that 'Where possible use a static URL structure without parameters for key indexable URLs. However, changing URLs is a big decision, and often it's not worth changing them for SEO purposes alone. If URLs are changed, then appropriate 301 redirects must be implemented.			
Links: Inter: Opportunity	Low	1	2.94	Pages that Review the missing anchor text outlinks and where appropriate include useful and descriptive anchor text to help users and search engines.			
Page Titles: Opportunity	Medium	8	23.53	Pages which Write concise page titles to ensure important words are not truncated in the search results, not visible to users and potentially weighted less in scoring.			
Content: R: Opportunity	Low	3	8.82	Copy on which Content improving the readability of copy for your target audience. Copy that uses shorter sentences with less complex words is often easier to read and understand.			
Images: O: Opportunity	Medium	2	1.92	Large Image Uncompressed images bloat pages with unnecessary bytes, so ensure images are optimised with compression, properly scaled, and using the best image format to reduce file size where possible.			
Page Titles: Opportunity	Medium	6	17.65	Pages which Consider updating the page title to take advantage of the space left to include additional target keywords or USPs.			
Security: Warning	Low	36	97.3	URLs miss! Consider setting a referer policy of strict-origin-when-cross-origin. It retains much of the referrer's usefulness, while mitigating the risk of leaking data cross-origins.			
Directives: Warning	High	2	5.56	URLs with a 'noindex' should be reviewed carefully to ensure they are correct and shouldn't be indexed. If these pages should be indexed, then the 'noindex' directive should be removed.
